THE COVER

New 10W-30 and 5W-40 viscosities expand the reach of the AMSOIL Synthetic ATV/UTV Motor Oil line.

*All trademarked names and images are the property of their respective owners and may be registered marks in some countries. No affiliation or endorsement claim, express or implied, is made by their use.

New Viscosities Deliver **Upgraded Protection** for More ATVs and UTVs

New AMSOIL 10W-30 Synthetic ATV/UTV Motor Oil and 5W-40 Synthetic ATV/UTV Motor Oil provide expanded protection for hard-working and performance ATVs and UTVs, including those made by Honda,* Can-Am* and Kawasaki.*

Protection in Tough Conditions

ATVs and UTVs are used to tackle any task or terrain, like pulling trailers, hauling gravel, herding livestock, plowing snow, powering through mud and more. This hard work and aggressive riding place a lot of stress on the engine. It's also common to modify UTVs and ATVs with accessories designed to increase power and productivity, like roof and door panels, a plow, a winch, skid plates and other accessories. These upgrades allow riders to do more, but they also add weight and increase the severity of operation. Added weight equals added heat, and heat causes standard-service lubricants to break down sooner.

AMSOIL Synthetic ATV/UTV Motor Oil is engineered to withstand these severe operating conditions by delivering reserve protection against heat. It provides reliable wear protection and aids in cooling shrouded engines, so you can feel confident that your machine is protected when tackling tough jobs around your property or riding aggressively on the trail.

All-Weather, All-Climate Performance

AMSOIL Synthetic ATV/UTV Motor Oil performs in both cold and hot temperature extremes. It remains fluid in sub-zero temperatures to provide excellent startup protection, and it resists thinning due to extreme heat and mechanical shear for superior protection in hot conditions.

Two New Viscosities

Like the rest of the AMSOIL Synthetic ATV/UTV Motor Oil lineup, the new 10W-30 and 5W-40 viscosities were developed specifically for demanding chores and terrain. Their advanced synthetic technology resists oxidation and protects against extreme heat to help prevent sludge and varnish. AMSOIL 5W-40 Synthetic ATV/UTV Motor Oil (AUV54) provides excellent cold-flow ability for quick starts in cold temperatures. AMSOIL 10W-30 Synthetic ATV/UTV Motor Oil (AUV30) provides exceptional protection during cold starts and high rpm. These severe-service formulations allow riders to confidently and safely push their ATVs and UTVs to the limit.

- **Outstanding protection** when used for racing, hauling, plowing or conquering tough terrain
- **Formulated** without friction modifiers to promote smooth shifting and positive clutch engagement
- **Fights** rust and corrosion
- **All-season** formula performs in extreme heat and cold
- **Wet-clutch** compatible

Premium Alternatives

Unlike OEMs who focus on making vehicles, we focus on one thing: developing premium lubricants and products that are purpose-built to protect the machines that use them. AMSOIL 10W-30 Synthetic ATV/UTV Motor Oil and AMSOIL 5W-40 Synthetic ATV/UTV Motor Oil have been developed to offer cost-effective, high-performance alternatives to Honda and Can-Am lubricants of the same viscosities. AMSOIL Synthetic ATV/UTV Motor Oil is Warranty Secure™ and will not void your ATV or UTV warranty.

2022-2023 Preview

The AMSOIL Championship Snocross 2022-2023 national tour kicks off Dec. 16 in Fargo, N.D. Here's a preview of what to look out for this racing season.

AMSOIL Championship Snocross is the premier snowmobile racing series, taking place over eight weekends at venues all around the midwest United States. Along with the AMSOIL Pro Class, competitors will line up in the Pro Lite, Pro Women and Pro Snowbike classes for 16 rounds of high-speed snowmobile action in the 2022-2023 season.

The first stop will be at Red River Valley Fairgrounds in West Fargo, N.D. Elias Ishoel will once again be defending the AMSOIL Pro Class title after winning the championship last season. One of Ishoel's highly anticipated rivals will be Team AMSOIL rider Hunter Patenaude. He and Ishoel battled closely on the slopes during the 2021-2022 AMSOIL Championship Snocross Series before Patenaude ultimately finished second in the Pro Class.

This season also features several newly formed teams on the circuit that bring some fresh competition to the tracks.

Team AMSOIL

Logan Christian will be joining Hunter Patenaude in the Scheuring Speed Sports trailer in the Pro Class division.

Follow Along

Fans who can't get to the tracks this season can tune in to all rounds of AMSOIL Championship Snocross airing live with replays on the FloSports/ FloRacing network. CBS Sports Network will also broadcast Pro Class race coverage later on. Follow the AMSOIL Inside Track at blog.AMSOIL.com to stay up to date on all the latest AMSOIL racing news and updates.

PRODUCTS THE PROS USE

- **Maximum** wear protection
- **Advanced** cold-temperature performance
- **Superior** deposit control
- **Excellent** for Polaris,* Ski-Doo* (E-TEC*), Arctic Cat* (C-TEC*), Yamaha* & more

To show our support for riders and to double-down on our confidence in our snowmobile oil, we offer the Runs on Freedom™ Limited Snowmobile Warranty.

It covers engine repairs for two years or 5,000 miles (8,000 km), whichever comes first, on current-model-year or newer sleds that use INTERCEPTOR® Synthetic 2-Stroke Oil exclusively.

3 Ways to Boost Diesel Truck Performance

A tuner, upgraded turbo and improved fuel delivery are cost-effective diesel power adders.

Here we are in 2022, about 20 years after the diesel-truck-performance industry exploded when enthusiasts took the slow, loud, unrefined diesel pickup beyond its original design intent. Lots can happen in 20 years, and boy has it. Everything from reliable daily drivers delivering 4X OEM power, to sub-4-second drag trucks, to millions in EPA fines.

No other platform lets you bolt on more power adders than a diesel pickup. Where else can you have a reliable 750-hp truck that can pull a camper one day, go off-roading another day and finish the weekend on the drag strip stomping much of the competition? Right, you can't.

Popular Diesel Power Adders

How do enthusiasts make all that diesel power? First, it's important to realize that power costs money. Go to any event or track and you'll see – the fastest drivers have the most money invested into their vehicles. Now that we've gotten that painful fact out of the way, let's talk about the three most common ways to add power.

Electronic Programming

Otherwise known as a tuner, this handy little device reflashes the ECM and adjusts fuel and air delivery to make more power. A plug-and-play version can easily add 50-200 hp, depending on the tuner. And they are cheap to buy. Be careful, though; this is where you start running into legal power and illegal power if the tuner deletes OEM emissions technology.

With a couple taps of a button – Wham! Lots more power. Is it reliable? Yes and no, depending on how far you go.

Your transmission, however, is not designed to handle the extra power. Soon you'll be over-running the torque converter or your clutches. Or both. So, if you want to add 150 hp or more, prepare to spend money on your transmission.

Forced Induction

In the diesel world, we really mean "turbocharging" since very few diesels use a supercharger. The turbo does all the heavy lifting of forcing air into the combustion chamber. Thanks to the invention of the common-rail fuel system, the engine will get ample fuel. But, with aggressive tuning, the stock turbo just won't deliver enough air.

You can solve this dilemma with an aftermarket turbo, but before you buy one, read the volumes of online articles about which one to choose. There are designs that are best for towing, racing and daily driving.

Like many things, diesel engine perfection is hard to achieve. You can't go too big with horsepower gains without reducing performance elsewhere. Go big or go home, I always say. Go too big without the right combination of other components, however, and you'll go nowhere.

Fuel Delivery

This area can include the injectors and fuel pump.

The fuel pump could be a lift pump or the CP3 or CP4 pump on the engine. If you've been around the block long enough, you've read about the issues with the CP4 pump failing, allegedly due to incompatibility with modern diesel fuel, which contains less sulfur

to provide lubrication. It's one of the reasons I always use AMSOIL diesel fuel additives to boost lubricity and protect the pump.

The same can be said for the fuel injectors. As I said earlier, you run out of air before fuel. But, if you have enough air, you'll quickly run out of fuel. To get more fuel to the engine, you need to ensure you have a pump that can supply it and a set of injectors that can spray it.

This is a good time to check the condition of your high-pressure fuel pump and ensure you have a good lift pump feeding it.

Once you have the supply side addressed, it's time to revisit your horsepower goal and intended purpose for the truck.

Aftermarket injectors use a different set of nozzles with bigger holes that can spray more fuel. But it's important to coordinate the spray volume and air-charge volume with the tune that is controlling your injectors.

Even in this plug-and-play world we've been enjoying for 20 years, you still need a plan. If you under- or over-size certain components, the truck won't like it. Communicating your horsepower goal to your aftermarket partners will set you up for success.

JEEP WORLD

PART 1: HISTORY OF A LEGEND

When “jeeps” rolled off assembly lines and into battle during World War II, they were immediately loved by GIs and, soon after, the American people. In the 80 years since, that “thing” enthusiasts have for Jeeps* has remained strong. The brand still elicits a sense of freedom and adventure with its rugged style and off-road capability. Most Jeep enthusiasts take their vehicles further, modifying them to be even more capable. In this issue, we explore the history of the Jeep brand.

WWII | 1940s

Like AMSOIL, Jeep has its roots in the military. The U.S. Army put out a request for proposal in 1940 for a general-purpose vehicle that was small, lightweight, had four-wheel drive and could carry a light machine gun. American Bantam* and Willys-Overland* both stepped up with design proposals. While the Army began testing those prototypes, they also reopened the door to other automakers, notably Ford* with its massive production capacity.

The final Jeep design was a mashup of the best from each proposal: The Bantam Spicer*-sourced four-wheel transmission and differential was mated with the Willys Go-Devil* engine and fitted with the bodywork configuration of the Ford Model GP.*

From fewer than 100 jeeps in 1940, almost 8,500 were built in 1941 in three different versions by Bantam (BRC-40), Willys (MA) and Ford (GP). Willys struggled to reduce the weight of the MA prototype to the U.S. Army specification of 2,160 pounds, coming in about 400 pounds over. But after rigorous testing, Willys was awarded the contract in July 1941 with an initial order of 16,000 MBs at a unit price of \$738.74. Today, the MA is the rarest of all pre-production Willys, with only about 30 known in existence.

The simple and tough jeep was an essential tool that helped win the war. The MB rendered other military vehicles obsolete, including horses and motorcycles with sidecars. Not only did they have more capability and versatility than other light vehicles, they could

also be modified for other duties, such as battlefield ambulance work, snow plowing, desert patrols, firefighting and more. They were burly enough to go almost anywhere and light enough to be picked up and moved by GIs when they were really stuck.

Civilian Life | 1945

The CJ was the first post-WWII Jeep-brand vehicle. The target market for Willys-Overland was the 5.5 million farmers in the U.S. The CJ could do the job of two draft horses at a speed of four miles per hour for 10 hours a day. Farm implements and industrial tools were fitted with power from a PTO. Jeeps became the platform for hundreds of applications, including the Zamboni* ice resurfacing machine.

The debut of the 463 Jeep Station Wagon in July 1946 marked the first all-steel station wagon and the forerunner of the Grand Cherokee* (vehicle code WK).

Rise of Off-Road Recreation | 1950s

The 1950s were marked by engineering milestones, and the off-road Jeep enthusiast began to emerge. The M38, popularized in the TV show M*A*S*H, served in the Korean War. It was essentially a combat-ready version of the CJ-3A with a stronger frame and suspension and could be driven under water.

Willys updated its CJ line in 1953 with more horsepower, capability and comfort. Component upgrades with the 81-inch wheelbase helped feed interest in off-road vehicles. The CJ-5 had a production run of 30 years, the longest

for any Jeep-brand vehicle. The CJ-6 is basically a CJ-5 with a longer wheelbase (101 inches); it's prized by collectors.

Wagoneer* and Commando* | 1960s

The Jeep Wagoneer ushered in an era of off-road-capable vehicles with luxurious interiors. It was the first 4x4 vehicle with an automatic transmission, independent suspension, overhead-cam six-cylinder truck engine and automatic full-time 4x4 system.

The SJ line of vehicles included the Wagoneer, early Cherokee* models and Gladiator* and J-Series* trucks. The SJ line was in production for more than 28 years.

The release of the Super Wagoneer* in 1965 upped the arms race for power and luxury and helped pave the way for the modern SUV. The Super Wagoneer carried a \$5,943 price tag – almost double that of the base Wagoneer.

With recreational off-roading on the rise, the Jeepster Commando* stepped in to compete with the Bronco* and Land Cruiser.* The Jeepster Commando (C-101) was built on a CJ-6 chassis and used the “Dauntless” V6 engine.

The AMC* Years | 1970s

By the 1970s, 4x4s were becoming quite popular and Kaiser* sold the Jeep brand to American Motors* (AMC) in 1970 for \$75 million.

The Quadra-Trac* 4x4 System was released in 1972 as the first automatic full-time four-wheel-drive system. AMC brought back the Cherokee as a sporty, two-door version of the Wagoneer

with featured bucket seats and sports steering wheel.

In 1976, AMC introduced the CJ-7 with a slightly longer wheelbase than the CJ-5 to allow space for an automatic transmission. The CJ-7 featured squared-off door openings compared to the CJ-5, which is a quick way to tell them apart. For the first time, the CJ-7 offered an optional molded plastic top and steel doors.

In 1978, Mark Smith, who is widely known as the father of modern four-wheeling, made history by leading a group of 13 explorers from Tierra del Fuego, Chile to Prudhoe Bay, Alaska using Jeep CJ-7s. The 21,000-mile route took 122 days to complete. AMSOIL was a part of the epic journey as AMSOIL synthetic lubricants were used to help ensure reliability and longevity of the Jeeps.

Rise of CUVs | 1980s & 90s

The 1980s marked the beginning of efforts to improve fuel efficiency. The Cherokee (XJ) was reintroduced with a unibody design and compact dimensions. It was the first vehicle with two available 4x4 systems: Command-Trac* Part-Time and Selec-Trac* Full-Time 4x4. XJs are popular with enthusiasts for their off-road capability and possibilities for aftermarket modifications.

AMC discontinued the CJ series and introduced a new Jeep Wrangler* (YJ) in 1986.

Then, in 1987, AMC was sold to Chrysler* and the Jeep brand became part of the Chrysler Jeep/Eagle Division.*

The Scrambler* pickup was replaced by the Comanche.* It didn't light up sales at the time, but today the Scrambler is popular among collectors and off-road builders.

New Capability | 2000s

The merger of Daimler-Benz* and Chrysler in 1998 resulted in new vehicle models. In 2001, a new Cherokee (KJ) replaced the previous Cherokee (XJ). The 2003 Wrangler Rubicon* brought capability to a new level. A revamped Grand Cherokee (WK) debuted in 2004, and a seven-passenger Jeep Commander* was introduced in 2006. A new Jeep Cherokee (KK) was introduced in 2008.

The Jeep Wrangler and Wrangler Unlimited* (JK) were introduced in 2007. The Wrangler is the modern-day descendant of the original Willys MB and remains a favorite of enthusiasts. It featured the signature seven-slot grille, round headlamps, solid axles, removable doors, exposed hinges and fold-down windshield – all with new levels of capability and versatility.

Modern Times | 2010 - Present

In 2016, global Jeep sales increased to 1.41 million units before reaching a current plateau of 1.7 million units.

The modernized 2014 Cherokee (KL) replaced the Liberty.* The Grand Cherokee Trailhawk* model was introduced in 2017 and includes the standard Quadra-Lift* Air Suspension, the Quadra-Drive* II 4x4 System, all-terrain tires and a skid plate package.

Jeep started the 2020s by reintroducing the Jeep Gladiator pickup, introducing the three-row Jeep Grand Cherokee L, upping power in the Jeep Wrangler Rubicon 392 and launching plug-in hybrid electric vehicles — the Wrangler 4xe and Jeep Grand Cherokee 4xe.

The Wrangler Rubicon 392 has 4x4 Trail Rated* capability with an electronic sway bar disconnect feature for massive articulation of the front tires. It enables steep climbs with a ramp travel index of 730. Maneuverability was improved with Fox* 2.0 monotube shocks and Dana* 44 wide-track axles with electronic lockers and 33-inch tires.

Most Jeep models on the road today will have the 3.6L Pentastar* V6 gasoline engine. Jeep has not widely used forced induction, but as engine downsizing progresses, expect more turbo Jeeps in the market like the 2.0L turbo offered today.

THE COOLANT LIFE

Coolant is a hard-working fluid. Heat produced by combustion must be removed to prevent overheating. Some of that heat escapes with the exhaust and some is absorbed by the engine block. But to keep heat within the engine's operating temperature range, coolant must be pumped through the engine to the radiator, where excess heat can be dissipated.

Besides aiding engine-temperature regulation, a quality coolant will also protect against:

- **Corrosion** that damages metal components.
- **Scaling** that interferes with heat transfer.
- **Cavitation** and pitting that damage cylinder liners (heavy-duty applications).

How important is it?

Coolant-system issues account for about 40% of engine problems, often due to motorists neglecting to maintain their coolant. It's easy to see why – coolant is a long-drain-interval product. With service intervals of around five years (and longer in heavy-duty applications), it's not top-of-mind. Compare that to engine oil, which is changed at least yearly and sometimes more often.

Coolant consists of a base (typically ethylene glycol or propylene glycol) mixed with additives and water. The base is primarily responsible for keeping the engine from turning into a block of ice in winter and a geyser in summer. Mixing water with coolant raises boil-over protection to around 265°F (129°C) and freeze protection to around -34°F (-37°C). The additives guard against corrosion, cavitation and scaling, while water effectively removes heat from the engine.

Coolant neglect leads to all kinds of problems, particularly if using inexpensive conventional green coolants found at almost every retailer. For example, corrosion occurs when an imbalanced coolant chemically reacts with metallic surfaces, forming reddish deposits that can appear as sludge or slime. Fouling can occur from contamination of the cooling system by microorganisms that create sludge and fouled surfaces with byproducts of rust or corrosion. As coolants age, the chemical protection of the metal surfaces breaks down and sludge accumulates.

The additives in green coolants use inorganic-acid technology (IAT), which relies exclusively on inorganic salts such as nitrites, phosphates and silicates for protection. Formulating exclusively with inorganic salts has drawbacks. They deplete rather quickly and can lead to scale buildup and sludge if maintenance is neglected.

One solution is to formulate the coolant using organic-acid technology (OAT). These coolants don't contain phosphates, silicates or other inorganic salts, virtually eliminating problems associated with conventional green coolants. They also last longer.

Another solution is hybrid organic-acid technology (HOAT). These coolants rely heavily on organic acids, but strategically use some inorganic salts to take advantage of their protective properties. A properly formulated HOAT coolant delivers long service life and excellent protection. Think of it as a belt-and-suspenders approach to protection.

Whichever coolant you use, it's best to flush the system about every five years to maintain its health.

Some do-it-yourselfers simply place a drain pan under the radiator and open the petcock. While it's better than nothing, this quick-and-dirty coolant service only removes about half the fluid.

Heavy-duty diesel operators often use supplemental coolant additives (SCAs). They're designed to be added to the coolant about halfway through the service interval, replenishing the additives that have depleted.

Coolant-system issues account for about **40% of engine problems**, often due to motorists neglecting to maintain their coolant.

That sounds like a decent solution, but SCAs have drawbacks. For starters, they're a hassle. The operator must test the coolant using test strips and match the color of the strip to a chart. The risk is adding too much SCA, which can cause additive "dropout." This occurs when the additives separate from the coolant base and form sludge and slime that plug coolant passages. Too much SCA can also lead to scale buildup, which inhibits heat-transfer.

Fortunately, there's a better way. You can use a high-quality coolant that doesn't require the hassle of SCAs and does a better job of fighting common problems like scale, sludge and slime.

AMSOIL provides such a coolant: Heavy-Duty Antifreeze & Coolant (ANTHD). It uses a HOAT formulation that delivers excellent protection against overheating and corrosion for up to 1 million miles (1,609,344 km), 20,000 hours or 8 years, whichever comes first, and it doesn't require the hassle of adding an SCA.

For passenger car/light-truck owners, AMSOIL Passenger Car & Light Truck Antifreeze & Coolant (ANTPC) features an OAT formulation that eliminates additive drop-out, scaling and other issues inherent to conventional coolants. It's pre-mixed 50/50 with high-quality water and is compatible with all ethylene and propylene coolant colors.

AMSOIL Low Toxicity Antifreeze & Engine Coolant (ANT) is the solution for those who want a low-toxicity, biodegradable coolant. Its HOAT formulation delivers excellent protection for up to 150,000 miles (241,000 km) or 5 years, whichever comes first, in passenger cars and light trucks. In heavy-duty applications, it lasts 1 million miles (1,609,344 km), 20,000 hours or 8 years, whichever comes first. It's compatible with all ethylene and propylene coolant colors.

The coolant system is critical for vehicle performance and longevity. If it's been a while, now is an excellent time to give your system a flush and a fresh start with an AMSOIL coolant.

Winning. Period.

Lyle Barnett is driven to win – and help others along the way.

Lyle Barnett knows what drives his passion to race: “Winning, period. There are influencers and there are racers out there. Win, lose or draw they’re happy to be there. I’m not OK with that. We’re there to win.”

Barnett is an increasingly successful NHRA driver. He recently achieved one of the biggest wins in drag racing, capturing an NHRA U.S. Nationals Pro Mod victory in September at the Indianapolis Raceway Park.

But, even with that level of success, he may still be best known as the charismatic driver of Beer Money, a ratty looking Mustang* that became a reality show winner and drag-strip brawler in small-tire, no-prep racing. And all of this has come after an accident that nearly ended his life.

THE LONGEST 28 SECONDS

In September 2015 at 24 years old, Barnett was prepared to go faster than he had ever gone at the South Georgia Motorsports Park.

“Our goal going down there was to go 190-plus and potentially go 4-0,” recounts Barnett.

But in the finals, an injector let go. That set went lean, burned through the back of the head via one of the oil passages and turned into a “flame thrower” that sent flames into Barnett’s face and helmet. He let go of the steering wheel as he tried to bat at the flames. The car nosed into the wall, exploding a fuel cell and raising the interior to an estimated 1,500°F (816°C).

Moments later, with his seatbelt melted off, Barnett managed to open his door and roll out. Track safety workers used fire extinguishers on him to put out the

flames. And then he lost consciousness for two weeks.

Barnett’s burns were most severe where he was under-protected: his face, head and hands. He says his lung damage was also extreme, the “equivalent of smoking 730,000 cigarettes in 28 seconds,” the length of time he was engulfed in flames.

“We strictly base the decision to use AMSOIL [products] on what we see in the engines after 25 to 30 runs.”

But incredibly, Barnett didn’t just survive, he kept looking forward. He returned to racing with a bang in February 2017 by etching his name into the history books as the driver of the first leaf-spring car under 4.20 in the 1/8th mile.

“I’ll be honest,” said Barnett, “there’s not a whole lot of negative that came from the accident. The two months in ICU and 20-plus surgeries; there’s a lot that I went through for a couple years there. But that was one of the most humbling experiences ever. It proved how precious life is and how quickly it can change.”

NO-PREP RACING

Outlaw drag racing is dangerous, even on a racetrack.

“Small tire, no prep is what I run with now,” said Barnett. “It’s really the evolution of street racing, one of those black-market deals that you don’t really talk about, and if you don’t know about it,

you don’t know.”

“No prep” means that the racetrack surface is not prepared with traction compounds as it is for most drag racing, keeping it more like a normal street. The result is, no-prep drivers often run on less-consistent courses and without top-level safety gear.

“Outlaw drag racing doesn’t follow a racing body,” said Barnett. “Safety tech was not really a thing and my accident changed that. I’ve said all along, if I saved one life, I’ve done my job.”

Since his accident, Barnett has been speaking out for reforms to make safety “more proactive and less reactive.”

“You’ve got to have on good stuff,” he said.

THE PERFECT TUNE

Beer Money churns out 1,700 hp.

“In general, we make more horsepower than we can use,” explained Barnett. “As long as the tire doesn’t spin, you can basically go as fast as you want to go.”

Managing that power requires driving skill and, in part, a tuning aspect, whether through timing, boost or traction control. Barnett has a secret tuning weapon in his longtime friend, Pete Harrold of Harrold Dyno Race Engines.

“When I first started racing, Pete was an arch nemesis of mine,” said Barnett. “He was a tuner and part-time driver and they used to kick my ass all the time, and I would’ve sworn they were cheating. As they say, if you can’t beat ‘em, join ‘em. So, in 2015 I joined Pete.

“Pete was the engine builder and tuner for Beer Money on the show. I provide him feedback on what the car is doing. We work well together.”

BEER MONEY

In 2017, Barnett was fan-voted onto season one of Horsepower Wars, a reality TV show centered on outlaw street racing. Each season is a shootout between four teams of six gearheads who have 10 days and \$10,000 to build a street-racing car. The winning team gets \$10,000 cash and keeps the car they built.

Beer Money was assembled from a 1989 Mustang and a stock block LS engine by team leader Eric Yost, Harrell, Barnett and fabricators Jason Smith and Chris Bailey.

"It cost about four weeks of my life and probably shaved about another 10 off," joked Barnett.

While Horsepower Wars was being shot, Barnett was interviewed by Netflix for Fastest Car. The show pits tricked-out sleeper cars against exotic supercars, like a 2011 Pontiac* minivan versus a Porsche* GT3.*

"I didn't necessarily have any sleepers and I definitely didn't have a super car," explained Barnett. "So, I had to tell them I didn't really have anything that fit. But I told them, 'If we win this show, I'll have the perfect car.'"

They won the show, and Barnett and Beer Money were on Fastest Car the following season. The reach of that show propelled Barnett's fame as a builder and driver.

"That's where I really got my following from," said Barnett. "That's where Beer Money got most of its fame."

PICKING UP OTHERS

Barnett uses his star power to raise money for families with kids in the JMS Burn Center at the Doctors Hospital in Augusta, Ga. where he was treated.

"There's nothing negative I could ever say about my experience, except of the crash itself," he said. "A lot of good has come out of it. For example, we've helped a lot of kids that have spent their Christmas holiday in the burn center."

He sees parents who take extended leaves or quit their jobs to be with their kids while they receive treatment and the financial toll that it takes on them. Barnett

helps as much as he can, sometimes as a motivational speaker at fundraisers for kids in the burn center.

"It's nice to be able to provide for those families," said Barnett.

THE AMSOIL DECISION

Barnett is a true believer in AMSOIL. He was introduced to AMSOIL through Harrold, who was an AMSOIL Dealer when he and Barnett started working together.

"He used everything from Break-in Oil to MP and Racing Oil," said Barnett. "I have tried other brands, but always come back to AMSOIL. You can have great results elsewhere in the engine, but if bearing life isn't good, then it's time to make a change. Bearing life is just imperative."

"We strictly base the decision to use AMSOIL [products] on what we see in the engines after 25 to 30 runs. That is why we stayed with AMSOIL and why we have never turned back."

Sam Cook Productions | @samcookproductions

DRIVING FORWARD

Barnett still has goals to chase down.

"I don't think I'm done climbing," he said. "I have aspirations to go to top-fuel racing. It's something I've always wanted to do, and I may have the opportunity to at least license and see if I can catch a ride."

But, for now Barnett plans to continue with Beer Money as the flagship of his program.

"Some people may think that's sad, but I love that thing and it does pretty well. It may look like a pile of junk, but I love it."

Synthetic Gasoline Motor Oil

Signature Series Keeps Pistons Cleaner

Even after doubling the length of the industry-standard test, AMSOIL delivered **40% cleaner pistons** than required by the standard.^{FF}

^{FF}Based on independent testing of AMSOIL Signature Series 5W-30 in the Sequence IIIH Engine Test (ASTM D8111), required by the ILSAC GF-6 and API SP specifications.

Signature Series Delivers Powerful Protection

AMSOIL delivers powerful protection. How good is it? An independent lab compared AMSOIL synthetic motor oil head-to-head against a leading competitor in a 100,000-mile (160,934-km) test^F. AMSOIL provided far superior wear protection and kept bearings looking like new.

^FTesting conducted in an independent lab using AMSOIL Signature Series 5W-30 Synthetic Motor Oil and a leading synthetic-blend 5W-30 motor oil in Ford F-150 trucks with 3.5L twin-turbo engines.

Signature Series

Signature Series Synthetic Motor Oil

Engineered for enthusiasts seeking maximum protection and performance. Precision-formulated with cutting-edge technology and a longstanding devotion to making the world's best motor oil. The result: engine protection that blows the doors off the highest industry standards. Guaranteed protection for up to 25,000 miles (40,200 km) or 1 year, whichever comes first.

Signature Series Fights Wear

AMSOIL Signature Series Synthetic Motor Oil provides **75 percent more engine protection against horsepower loss and wear** than required by a leading industry standard^A, extending the life of vital components like pistons and cams.

^ABased on independent testing of AMSOIL Signature Series 0W-20 using the ASTM D6891 standard test.

Signature Series Guards Turbos

Signature Series protects turbochargers **72% better** than required^C by the GM dexos1[®] Gen 2 specification.

^CBased on independent testing of AMSOIL Signature Series 5W-30 in the GM turbo coking test.

Signature Series Protects Against LSPI

AMSOIL synthetic motor oils achieved **100% protection against LSPI**.^B

^BBased on zero LSPI events in five consecutive tests of AMSOIL Signature Series, XL and OE 5W-30 Motor Oil in the LSPI engine test required by the GM dexos1 Gen 2 specification.

Signature Series Cleans

AMSOIL Signature Series Synthetic Motor Oil has **50% more detergents**^P to help keep oil passages clean and promote oil circulation. It provides **90% better protection** against sludge^{DD}.

^Pvs. AMSOIL OE Motor Oil

^{DD}Based on independent testing of AMSOIL Signature Series 5W-30 in the ASTM D6593 engine test for oil screen plugging as required by the API SN PLUS specification.

Signature Series Helps Keep Engines Cleaner

AMSOIL Signature Series is fortified with a heavy treatment of detergent additives, delivering **28 percent more acid-neutralizing power** than Mobil 1[®] and helping engines stay cleaner, longer.^{LL}

^{LL}Based upon independent testing of Mobil 1 Annual Protection Full Synthetic 5W-30 and AMSOIL Signature Series 5W-30 in ASTM D2896. Oils purchased July 2020. All trademarked names and images are the property of their respective owners and may be registered marks in some countries. No affiliation or endorsement claim, express or implied, is made by their use.

Signature Series Resists Viscosity Increase

AMSOIL is barely challenged by the industry-standard testing, demonstrating only a 0.1% viscosity increase. Even when the test length is doubled, AMSOIL **delivered twice the viscosity control** required by the standard.^{GG}

^{GG}Based on independent testing of AMSOIL Signature Series 5W-30 in the Sequence IIH Engine Test (ASTM D8111), required by the ILSAC GF-6 and API SP specifications.

^FBased on independent testing of AMSOIL XL 5W-30 motor oil in the GMOD engine test required for the GM dexos1 Gen2 specification.

OE Protects Against Wear

OE provides **47 percent more** wear protection.^G

^GBased on independent testing of OE 0W-20 in the Peugeot TU3M Wear Test as required by the dexos1 Gen 2 specification.

XL Synthetic Motor Oil

For enthusiasts who want to do something extra for their vehicle. Engineered for advanced automotive technology, including turbos and direct injection. Boosted formulation delivers more cleaning power and promotes longer engine life. Extra protection that lasts up to 12,000 miles (19,300 km) or 1 year, whichever comes first.

Synthetic Diesel Oil

Keeps Turbos Clean

Signature Series Max-Duty Synthetic Diesel Oil provides protection boosted to the max, delivering up to **60% better turbo cleanliness¹** and withstanding the extra demands you place on the turbo when pulling heavy loads or updating the tune for maximum horsepower.

¹Based on specification standards of CAT C13 2nd Ring Top Land Carbon testing.

AMSOIL Fights Wear

AMSOIL delivers **powerful engine protection**. How good is it? In independent testing compared to a leading brand, AMSOIL Signature Series Diesel Oil provided long-lasting wear protection, **keeping cylinder liners looking like new**.^{DD}

^{DD}Based on independent testing of AMSOIL 5W-30 Signature Series Max-Duty Synthetic Diesel Oil and a leading conventional 15W-40 diesel oil using the Detroit Diesel® DD13 Scuffing test for specification DFS 93K222.

Protects Against Rust

Signature Series Max-Duty Synthetic Diesel Oil provides up to **2X better rust protection**.^K

^KBased on industry standard testing using the NIMMA FC-W Rust Test.

Reduces Oil Consumption

Heavy-Duty Synthetic Diesel Oil provides up to **66% less** oil consumption, while Signature Series Max-Duty Synthetic Diesel Oil provides up to **76% less** oil consumption.^L

Superior Cold-Temperature Protection

AMSOIL Diesel All-In-One provides as much as **32°F (18°C) better protection** against cold-temperature gelling than Howes® Lubricator Diesel Treat.^M Plus raises cetane up to 4 points.

^MBased on independent testing in July 2017 of AMSOIL Diesel All-In-One and Howes Lubricator Diesel Treat using diesel fuel representative of the U.S. marketplace and Howes' recommended treat ratio for above 0°F (-17.8°C).

Diesel Cold Flow¹⁷

Effectively modifies wax crystal formation at low temperatures to depress diesel fuel pour point and improve cold-flow filtration properties. Lowers cold filter-plugging point (CFPP) by up to 40°F (22°C) in ultra-low-sulfur diesel (ULSD).

Extended Filter Life

- AMSOIL Oil Filters designated with product code EA15K are recommended for 15,000 miles (24,100 km) or one year, whichever comes first, in normal or severe service. NOTE: Change oil filter at every oil change.
- AMSOIL Oil Filters designated with product code EAO are recommended for 25,000 miles (40,200 km) or one year, whichever comes first, in normal service or 15,000 miles (24,100 km) or one year, whichever comes first, in severe service. NOTE: Change oil filter at every oil change.
- When AMSOIL Oil Filters are used with a motor oil other than AMSOIL motor oil, the filter should be changed according to the vehicle manufacturer's recommendation.

Oil Filters

AMSOIL Oil Filters rank among the highest efficiency filters available to the auto/light-truck and powersports markets, providing a filtering efficiency of 99 percent at 20 microns. Featuring advanced full-synthetic technology, AMSOIL Oil Filters provide greater efficiency, capacity and durability than cellulose filters, extending engine and filter life and reducing engine wear. Easy-grip coating eases the job of tightening and loosening filters. Call 1-800-777-7094 (Monday-Friday, 7 a.m.- 7 p.m. Central Time) or look up your vehicle at AMSOIL.com to determine the appropriate filter for each application. NOTE: Change oil filter at every oil change.

EAHD

Heavy-Duty Extended-Life Oil Filters

Provide excellent 99 percent filtering efficiency at 20 microns and high contaminant capacity for heavy-duty on- and off-road diesel and gasoline applications. Provide extended service intervals that coincide with the maximum drain intervals of AMSOIL synthetic engine oils.

See AMSOIL.com or call (715) 399-8324 (TECH) (Monday-Friday, 8 a.m. - 5 p.m. Central Time) for application information.

EABP

Bypass Filters

High-efficiency bypass filters effectively remove minute dirt particles and soot by working in conjunction with the engine's full-flow filter and capturing contaminants that full-flow filter can't remove.

See AMSOIL.com or call (715) 399-8324 (TECH) (Monday-Friday, 8 a.m. - 5 p.m. Central Time) for application information.

Synthetic Marine Oil

"Switched my marine big block over to AMSOIL 25W-40 and have seen better oil pressure and increased performance over 30W oil. I'll definitely use this oil again."

— Runky
Portsmouth, RI

Synthetic Marine Engine Oil

Formulated specifically for use in four-stroke gasoline-fueled engines used in marine applications.
