Synthetic Chaincase & Gear Oil

Long-Lasting Performance for ATVs and Snowmobiles

AMSOIL Synthetic Chaincase & Gear Oil provides superior protection and performance for enclosed chains and gears found in snowmobiles, ATVs and general equipment. It is formulated with extreme-pressure additives for increased protection against wear that helps extend chain and gear life. AMSOIL Synthetic Chaincase & Gear Oil repels water and inhibits rust, oxidation and foam, and its low pour point ensures superior low-temperature fluidity that reduces drag to deliver maximum power.

Designed Specifically for Chaincases & Gearcases

Some enthusiasts use automatic transmission fluid or gear lube in their ATV and snowmobile chaincases and gearcases, but neither fluid is designed for these applications. Automatic transmission fluid is a hydraulic fluid that lacks extreme-pressure additives, leaving gears and chains vulnerable to wear and premature failure. Automotive gear lube is designed to lubricate hypoid gears and is too thick for proper chain and gear lubrication in powersports applications, impairing circulation and leading to wear and decreased energy efficiency.

AMSOIL Synthetic Chaincase & Gear Oil is specifically engineered to meet the demands of enclosed chaincases and gearcases, providing extreme-pressure protection and low-temperature fluidity for superior performance and protection.

Long-Lasting Protection

AMSOIL Chaincase & Gear Oil is a 100% synthetic formulation that resists shear and chemical breakdown better than conventional fluids. Its superior base oils and additives provide long-lasting protection.
